EZ-GAZ™

Visibility, control, savings

- Reduce run-outs and rush delivery costs with real time gas monitoring and low-pressure alerts
- Minimize valuable time and personnel resources spent on point-of-use gas pressure monitoring and order management
- Improve forecasting and supply optimization with gas tracking and trending data
- Support staffing priorities and scheduling with remote systems visibility

Always there to simplify gas management

Managing gas supply is a small part of managing your facility, however, it can be time consuming. Your daily challenges may include estimating how much gas is left in your cylinder and when to reorder, overstocking or exchanging early to avoid runouts, and spending too much time manually tracking gas levels and switching-out cylinders. All of these routine tasks prevent you from focusing on your core activities, while adding substantial waste and unnecessary costs.

As part of the Airgas Supply Chain Solutions, EZ-GAZ is a new and unique digital gas monitoring service that helps you optimize and monitor your gas supply—get peace of mind with simply knowing what you have now and when you need more.

EZ-GAZ™

Know how much gas you have and when you'll need more

Get instant and accurate gas content data, wherever and whenever, for all areas where cylinder gas is used

- Access gas cylinder pressure levels throughout your facilities, remotely
- Minimize supply issues with accurate gas usage and consumption data using the secure Airgas portal

Monitor gas supply point levels in real-time and at your convenience

- Get instant and accurate gas use information along with uninterrupted supply options to improve scheduling and free time to focus on patient care
- Reduce frequency of pressure checks on cylinders
- Avoid unnecessary gas supply inspections with remote online content visibility

Get automatic alerts when your preset gas pressure level is detected, no matter where you are

- Simplify gas ordering and replenishment on Airgas.com
- Improve cylinder gas management with accurate change out forecasting and reliable supply
- Limit gas waste with improved supply solutions

Optimize your gas supply and delivery equipment for your operation

- Tap into Airgas expertise to determine the best supply mode and equipment: cylinders, packs, bulk tanks, and more
- Multiple configurations are available for cylinders—from single to packs with automatic change-over panels. Custom configurations increase safety, reduce waste and minimize changeouts. Systems can be fully configured with regulators and changeover manifolds before arriving at your operation

How EZ-GAZ works

Installation of EZ-GAZ is simple and quick—this highly secure digital system requires no wiring and is compliant with current FCC regulations and codes. Once installed, your data is safely collected and securely transmitted to your account, with real-time access that immediately improves the way you manage your gas supply.

Measure the pressure of your gas supply

Transmit your gas data securely

Receive alert notifications and view data online
